EARLY CHILDHOOD EDUCATION

## **NEW!** Working with Young Children

by Judy Herr, Ed.D. ©2008, 720 pages

**Working with Young Children** uses a new, eye-catching design to introduce your students to the fast-growing field of child care services and early childhood education. Your students will develop skills for guiding children effectively while keeping them healthy and safe. **Working with Young Children** applies child development principles to child care settings. On-site photos enhance the inviting, colorful format. Internet activities are included in every chapter. This text provides current health, safety, and nutrition information. Additional topics include: technology, cultural diversity, family stressors, and child care careers.

- A much-requested new chapter on Child Development Principles and Theories has been added! This chapter contains current information on brain development and features the developmental theories of Erikson, Piaget, Vygotsky, and Gardner.
- Cross-Curricular Links and Workplace Links have been added to the end-of-chapter activities.
- Topics include the CDA credential; guidance principles; water play, sand play, and blockbuilding experiences; updated health and nutrition information; and on-the-job applications.

FOOD SCIENCE AND DIETETICS

## Principles of Food Science

by Janet D. Ward ©2007, 616 pages

**Principles of Food Science** incorporates science concepts into a lab-oriented foods class. This text shows how the laws of science are at work in foods prepared at home and by the food industry. Each chapter includes engaging features focusing on such areas as current research, technology, and nutrition news. Through lab experiments in the text and Lab Manual, students will practice scientific and sensory evaluation of foods. They will discover how nutrients and other food components illustrate basic chemistry concepts. They will examine the positive and negative impacts microorganisms have on the food supply. Students will also explore the variety of careers available to workers with a food science background.

- Includes topics such as the role of watchdog groups in regulating the food industry, how to evaluate scientific studies, and professional associations in this field.
