Course: Middle School Health Education Grades 6

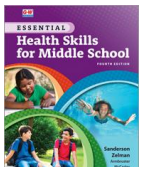

Wellness Education – Grade 6
All West Virginia teachers are responsible for classroom instruction that integrates content standards, learning skills, and technology. The goal of sixth grade health education is to address many important social, emotional and physical changes of young adolescents. Decision-making steps and application are integrated into all topics of discussion as students examine potential long- and short-term consequences of decisions and their impact on all aspects of health (e.g., physical, emotional, social, mental/intellectual, spiritual, environmental and occupational). Students critically examine concepts related to personal health; injury prevention, alcohol, tobacco, and other drugs; recognize the impact of positive health decisions on personal goal attainment. The goal of the physical education program of study at the sixth-grade level is to improve students' understanding of the connections between physical activity and lifelong wellness. Movement is critical to proper growth and development at this age; physical education assists students in developing a healthy body and self-image. Social and emotional development is enhanced as students begin to use motor skills in team building situations.

to West Virginia Department of Education
Course: Middle School Health Education Grades 7

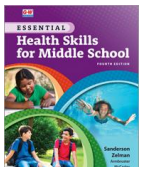

Wellness Education – Grade 7
All West Virginia teachers are responsible for classroom instruction that integrates content standards, learning skills, and technology. The goal of the seventh-grade health education program of study is to address important social, emotional, and physical changes adolescents face. Topics of discussion provide opportunities for students to practice decision making, communication skills, and goal setting. Students develop strategies to reduce risks and enhance personal health and wellness. The goal of the physical education program of study at the seventh grade level is to continue to develop specialized skills, offer new opportunities to explore recreational activities and lifetime fitness activities, and build on wellness and social skills previously introduced. During this critical time period, changes due to maturation and growth affect the students' skill level as they adjust to physical changes. Social development is an important part of the physical education curriculum.

to West Virginia Department of Education
Course: Middle School Health Education Grades 8

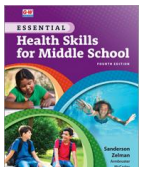

Wellness Education – Grade 8

All West Virginia teachers are responsible for classroom instruction that integrates content standards, learning skills, and technology. The goal of the eighth-grade health education program of study is to provide opportunities for students to practice decision making, communication skills, and goal setting in role-played or simulated situations that outline the importance of taking responsibility for individual actions. Students examine violence prevention and develop strategies to promote safety for themselves and others. Students learn to access, use, critically evaluate, and apply health information and services. The goal of the eighth-grade physical education program of study is to allow students to further explore individual interests in lifetime physical activities and gain the knowledge and skills for future participation. A strong emphasis on lifetime wellness, physical activity, and social skills supports the goal of becoming physically-active adults.
