

## How do I configure the G-W External App in my Canvas LMS?

When a G-W Common Cartridge is imported into a course, an External App is automatically created in that course. Canvas will display a message about the security parameters of the external tool (which will be named "www.g-wonlinetextbooks.com").

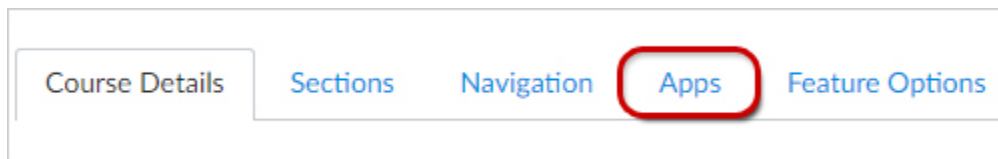

As a best practice, we recommend configuring the External App on the site level instead of on a course-by-course basis. Follow the instructions below to remove the External App that was automatically added to the course and add it at the site level.

- Within the course where the Common Cartridge content resides, select the **Settings** link.

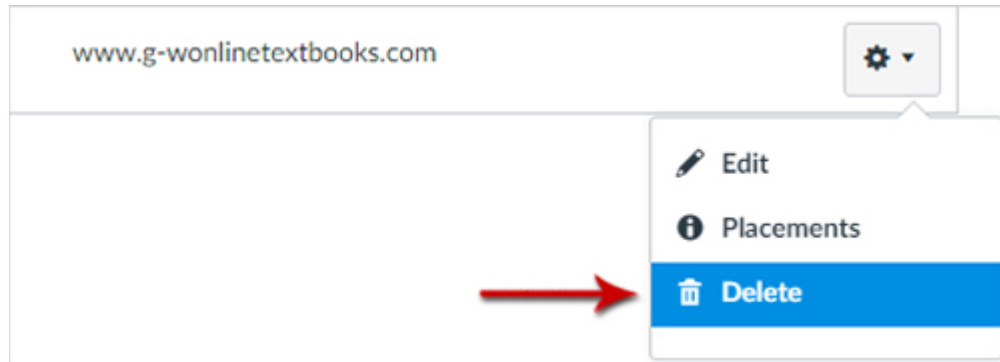

- Select the **Apps** tab.

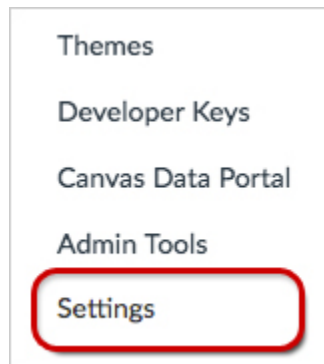

- Select the **View App Configurations** button.

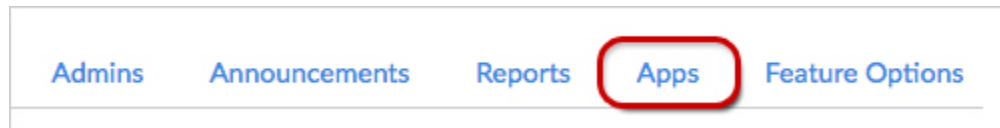

- Locate the app named "www.g-wonlinetextbooks.com". Select the corresponding Settings (gear) icon and then select **Delete**.

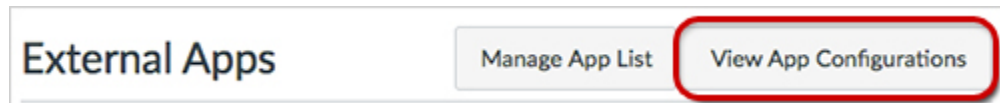

- Navigate to the Admin section of your Canvas site and select **Settings**.

- Select the **Apps** tab.

- Select the **View App Configurations** button.

- Select the **+ App** button.

- Add/adjust the following items within the App settings.
  - **Configuration Type:** Manual
  - **Name:** Goodheart-Willcox Publisher
  - **Consumer Key:** Copy and paste the *Key* from G-W's provided integration PDF.
  - **Shared Secret:** Copy and paste the *Secret* from G-W's provided integration PDF.
  - **Launch URL:** Copy and paste the *Tool Launch URL* from G-W's provided integration PDF.
  - **Domain:** www.g-wonlinetextbooks.com
  - **Privacy:** Public
  - **Custom Fields:** Copy and paste the *Custom Parameter* from G-W's provided integration PDF.
  - **Description:** If desired, add a description about this App, such as "Use for Common Cartridge/LTI integrations with Goodheart-Willcox Publisher."
- Select **Submit** to save the App.
